WEATHER SYNOPSIS BY REGION

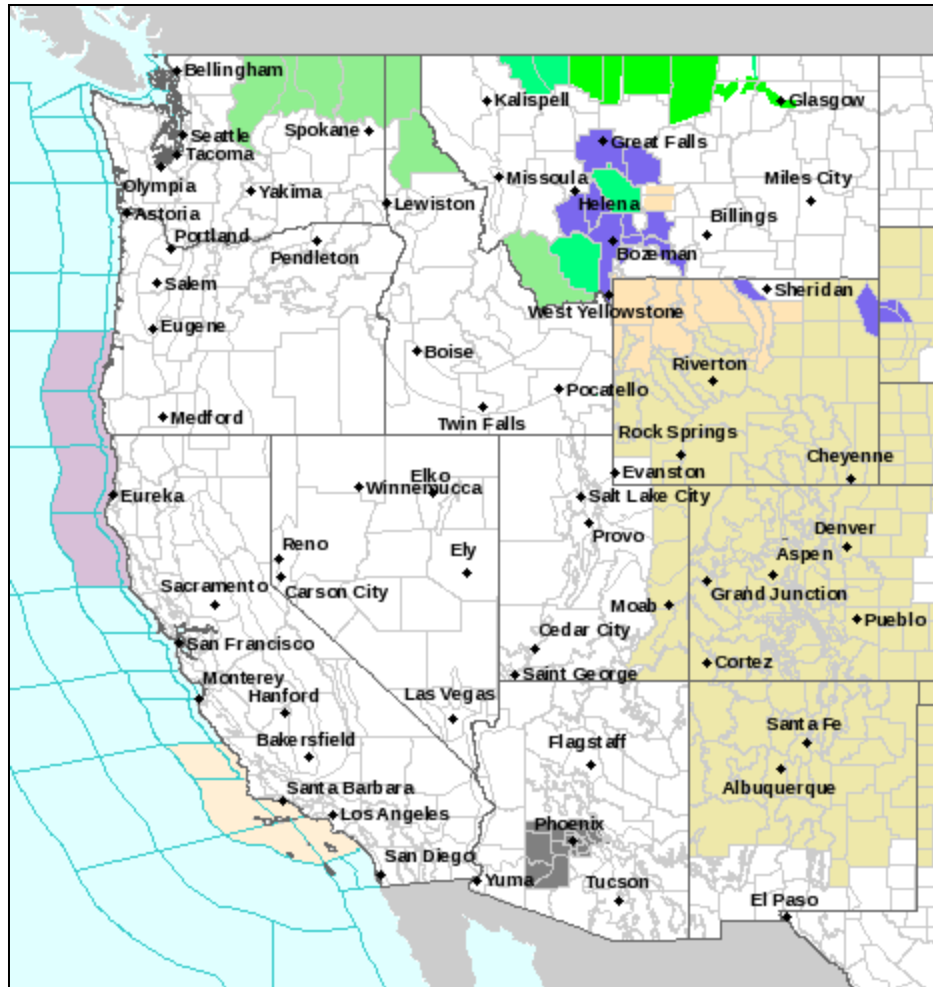

NORTHERN CALIFORNIA

High pressure building in from the eastern Pacific will produce warm and dry weather into the early part of this week. Afternoon temperatures will be 10-15 degrees above normal and minimum afternoon humidity in inland areas will be 10-20%. Northerly winds will gust to 25 mph or so in wind-prone areas from the western Cascade-Sierra slopes to the foothills on the west side of the Sacramento Valley during nights and mornings. Low pressure dropping in from the Gulf of Alaska will begin to produce more clouds and S-SW winds during the middle of this week, and we'll see an increasing chance of showers from this low later in the week.

SOUTHERN CALIFORNIA

Quiet and seasonably warm weather will continue into the first half of this week, but long range models indicate a weak cutoff low pressure may bring cooler and breezier weather back to the district Thursday. Isolated showers may also be possible by then over Central California, but no significant rain or offshore winds are expected the next 7-10 days.
